

QUALITY MANAGEMENT SOLUTIONS FOR THE PETROLEUM INDUSTRY

Comprehensive API Spec Q2 Compliance

Oil & Gas service providers are under increasing pressure from customers to comply with the new compliance standards and regulations.

The change in focus on quality systems requires companies to rethink their approach to compliance. Solutions are required that will adapt quickly to the ever-changing market demands while ensuring compliance, and the subsequent reduction in liability, exposure and risk.

Accupoint's flexible, web-based solutions provides a toolkit to save staff time in data acquisition and analysis, while ensuring that compliance metrics are managed and monitored consistently.

Unlike most traditional software solutions, the SAM platform leverages the most innovative cloud-technology available. As a result, employees can access the platform on any web enabled device: smartphone, tablet, laptop, and desktop. This means all of your compliance information is located in one application and can be accessed and updated from the point-of-operation, be it a drilling rig, the shop floor, or boardroom.

With over 43 integrated modules and 85 build-in reports, Accupoint Software's SAM solution allows organizations to manage all of the API Spec Q2 requirements.

API Q2 Components

- Project & Task Management
- Project Milestone Management
- Training & Curriculum Management
- Materials Management
- Service Design Review
- Service Validation Management
- Permits & Regulation Documents
- Corrective & Preventive Actions
- Calibration Management
- Risk Management & Assessment
- Audit & Non-Conformity Management
- Service Quality Plan Documentation
- Asset Management & Repair Tracking
- Asset Transfer Tracking
- Document Management
- Contingency Planning
- Management of Change

What SAM Can Do for You

The SAM platform gives you the ability to guarantee your API Q2 compliance, regardless of size or geographic location. But the real benefits go much further. By using SAM to establish your organization's commitment to quality management, you will:

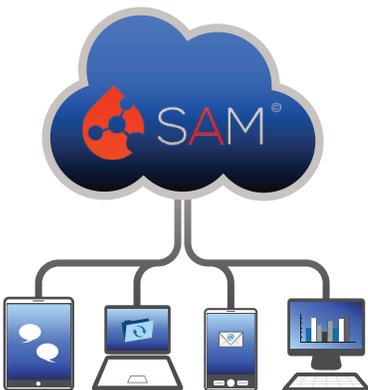

- Acquire new business as major oil and gas firms require robust QMS to award contracts
- Enhance organizational decision making with a comprehensive, customizable metrics dashboard
- Present aggregated data to operators, auditors, managers, and executives
- Lower the cost of compliance with improved efficiencies and consistency
- Improve decision making with an integrated process approach to project management

Streamline and Simplify Your Q2 Management

Manual templates, and even traditional software solutions, fail to adapt to shifting market demands, ensure the compliance of multiple, geographically disparate locations.

Oil and gas service providers require a tool that can connect multiple locations with real-time communications and connectivity. Accupoint's SAM platform provides access to your organization's quality information through a secure web-browser. As such, every user can access the information on any web-enabled device, including smartphones and tablets. Bring your compliance information with you, whether you're on the shop floor, on site, or in the board room.

The SAM platform offers additional benefits, including:

- Agile builds allowing for easy customization
- Reduced implementation time measured in days, rather than weeks or months
- Real-time reporting from the point of operations
- Scalable technology, allowing you to grow without incurring additional costs
