

Innovative API Spec Q1 Management Software

In today's globally competitive market, your oil and gas customers are demanding high-quality product and services. In order to meet their demands and maintain your competitive advantage, your organization must closely monitor the quality management system. Our InterLink flexible API Spec Q1 software for manufacturing provides an oil and gas compliance tool set that gives you an accurate, comprehensive, and actionable picture of your process quality performance.

► SOLUTION OVERVIEW

The InterLink platform is the oil and gas industry's leading web-based quality management software designed specifically for the administration of the API Spec Q1-9th Edition standard. The InterLink platform contains more than 64 integrated modules and built-in reports that enable users to control all aspects of the API Spec Q1 requirements from a single, secure, and easy-to-use oil and gas compliance tool.

Delivering Verifiable
Performance Results by
Turning Insight Into Action

► CHALLENGE

Few things are more detrimental to your organization than a product recall. For that reason, it is crucial that you guarantee your products are absent of defects. InterLink provides the control of production processes necessary to identify non-conformities that could lead to a product recall. Recognizing these defects before they reach the consumer, improves customer relations and eliminates associated costs.

Spreadsheet management solutions or manual templates result in cumbersome, isolated systems that fail to ensure the operational excellence of every product, facility or location. Organizations, of any size, will benefit from the increased productivity, efficiency, and security of adopting the InterLink API Specification Q1 QMS software application.

With InterLink, you have the ability to host all your process quality records and compliance information on a single secure server, accessible from any web-enabled device.

► SOLUTION BENEFITS

The InterLink platform gives you the capacity to guarantee API Q1 compliance. By using InterLink to build consistent traceability and compliance into all of your processes, you can ensure:

- Mitigate the risks from product recalls
- Synchronize quality and manufacturing
- Integrate product design and quality data
- Reduce the time to market of new products
- Satisfy customer demand for higher quality, lower cost products
- Provide quality visibility across the value chain

Accupoint Software Gets You In Compliance and Keeps You Certified

► SUPPORT SERVICES

Technical Services

Our Web Support team can provide a wide range of application support services including implementation consulting, data import and custom programming.

Application Support

Accupoint Software maintains telephone and email based help desks, as well as an online self help knowledge portal.

Platform Security

All of your records and related information are secured with daily back-ups, point to point encryption and additional physical security protocols.
