Achieve Gap-Free Process Safety Management

Comprehensive process safety management, or PSM, is more than merely a good practice. Adhering to this OSHA-driven framework is a must for any business or facility that handles highly hazardous chemicals (HHCs).

While few software packages are perfect right out of the box, **OpX** employs a modular structure that lets you make exclusive use of the governance mechanisms required for your processes. Whether you need to assess risks, manage change or oversee non-conformity, our software gives you the custom application that ticks all the boxes.

Attain Universal Compliance

One of the major advantages of the **OpX** platform is that it's intuitive and easy to scale. Our secure, web-based solution lets enterprises delegate critical compliance tasks to key personnel without massive training burdens or complex rollout procedures. In short, you can enact accurate oversight standards regardless of how decentralized your business processes may be.

It doesn't matter how well you think your internal safety practices are operating. Your enterprise can't survive without a proven PSM strategy. For this, you'll require a management tool specifically tailored to the task. That is why so many enterprises depend on **OpX**.

Why OpX?

OpX helps you manage PSM compliance to safeguard workforces, contractors, facility visitors and the material resources that power your business. Our flexible, modularized solution also simplifies compliance with EPA Risk Management, or RMP, so that you can establish your firm as a key player in protecting the communities you serve. In addition the **OpX** platform deploys uniformly across diverse organizational structures, computers and mobile devices. As a result, it's possible to monitor the efficacy of your compliance efforts with increased impartiality. Simply deploy without purchasing special software or hardware, customize the tools you require, and go from irregular regulatory adherence to consistent compliance.

What Goes Into Good PSM?

OSHA PSM standards are enumerated within 29 CFR 1910.119. To comply with the regulations, your program should address the following 14 fundamentals:

The OpX Advantage

OpX is designed for comprehensive PSM that eliminates compliance gaps with extreme prejudice. Whether your weaknesses lie in storage technology, hazard monitoring, toxicity labeling or employee training, our solution makes it easy to customize your compliance strategies for effective results. Learn how by taking OpX for a test drive today.

OpX Solution Features

- Custom Reports, Metrics & Key Performance indicators
- Alerts & Email notification
- Customizable to your individual process needs
- Easy integration with existing applications
- No hardware or software to purchase and maintain
- No complex roll-out procedures to deploy
- Flexible, easy to scale platform
- Intuitive user interface
- Anywhere, anytime access to information

OpX Solution Benefits
