

# Comprehensive API Spec Q2 Management

Oil & Gas service providers are under increasing pressure from customers to comply with the new compliance standards and regulations.

The change in focus on quality systems requires companies to rethink their approach to compliance. Solutions are required that will adapt quickly to the ever-changing market demands while ensuring compliance and a reduction in liability, exposure and risk.

Accupoint's SAM solutions provides a toolkit to save staff time in data acquisition and analysis, while ensuring that compliance metrics are managed and monitored consistently.

## ► SOLUTION OVERVIEW

Unlike most traditional software solutions, the SAM platform leverages the most innovative cloud-technology available. As a result, employees can access the platform on any web enabled device: smartphone, tablet, laptop, and desktop. This means all of your compliance information is located in one application and can be accessed and updated from the point-of-operation, be it a drilling rig, the shop floor, or boardroom.

With over 43 integrated modules and 85 build-in reports, Accupoint's SAM solution allows organizations to manage all of the API Specification Q2 requirements.

**Delivering Verifiable  
Performance To Service  
Supply Organizations**

## ► WHAT SAM CAN DO FOR YOU

The SAM platform gives you the ability to guarantee your API Q2 compliance, regardless of size or geographic location. But the real benefits go much further. By using SAM to establish your organization's commitment to quality management, you will:

- Acquire new business as major oil and gas firms require robust QMS to award contracts.
- Enhance organizational decision making with a comprehensive, customizable metrics dashboard.
- Present aggregated data to operators, auditors, managers, and executives.
- Lower the cost of compliance with improved efficiencies and consistency.
- Improve decision making with an integrated process approach to project & task management.

## ► SOLUTION BENEFITS

The SAM platform gives you the ability to guarantee your API Q2 compliance, regardless of size or geographic location. But the real benefits go much further. By using SAM to establish your organization's commitment to quality management, you will:

- Acquire new business as major oil and gas firms require robust QMS to award contracts.
